The Perfect Shoe

Design and 3D Printing

Nathan Durand

Project Description

Mentors

- Pavlina Pryor-Director of Footwear 3D Design Nike/ Co-Founder & CCO, Design Morphine
- Monica Poulsen Senior Concept Engineer Nike
- Sara Darland Principal Product Engineer Nike
- Rachel Noon Footwear and Pattern Engineer Adidas

Community Connections

- Coaches
- Players
- Engineers

Purpose and Audience

Inspiration

Challenges

Success

Data

Midsole

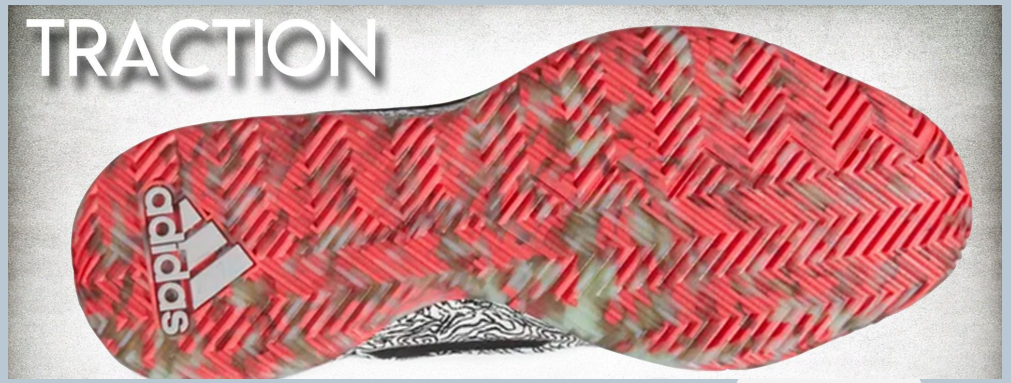

- The drop in midsole is better for court feel
- It is in some of the most popular shoes Kobe 6 & GT Cuts
- It is not good for ankle support
- It's more likely to move around

Traction

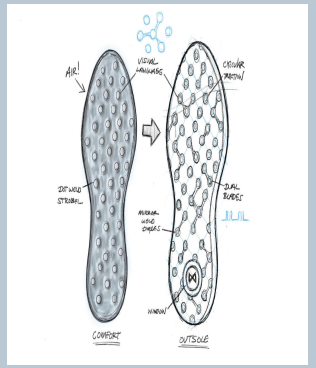

- Dame 6's herringbone pattern
  - Minimal dust pickup due to herringbone design
  - Strong court grip enhances traction .

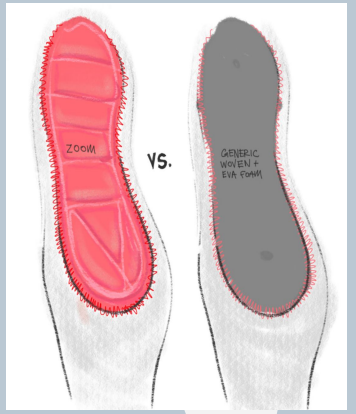

Cushioning

- Zoom strobe unit
  - Stroble is extremely versatile in the placement options of Zoom units.
  - Stroble is good because of it full length coverage
  - Not pop like air max

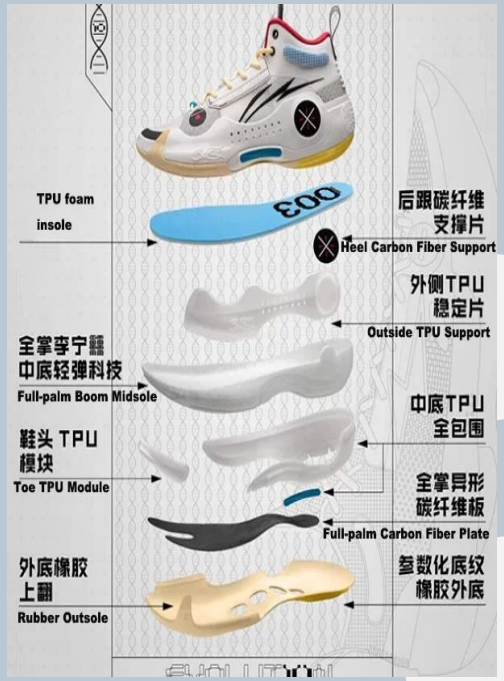

Carbon Fiber Plate

- Increases the energy return you get from the shoe
- Sewing the carbon fiber plate into the shoe vs being dropped in enhances ankle stability

OutSole

- Raised heel/ Zoom foam
  - The bottom is all react foam it is not only safer and more protective but it will help you jump higher
  - The raised heal and additional foam allows for extra protection

Materials

- Filon and TPU mesh
  - Advantages of filon for durability and breathability.
  - TPU mesh is better because it is stronger and lighter weight

Comfort / Ankle Protection

- Features
  - The extra ankle padding adds to comfort
  - There is a direct relationship between comfort and injury prevention.
  - People are starting to wear low top basketball shoes because they look cooler
  - The sock like top allows for a form fit

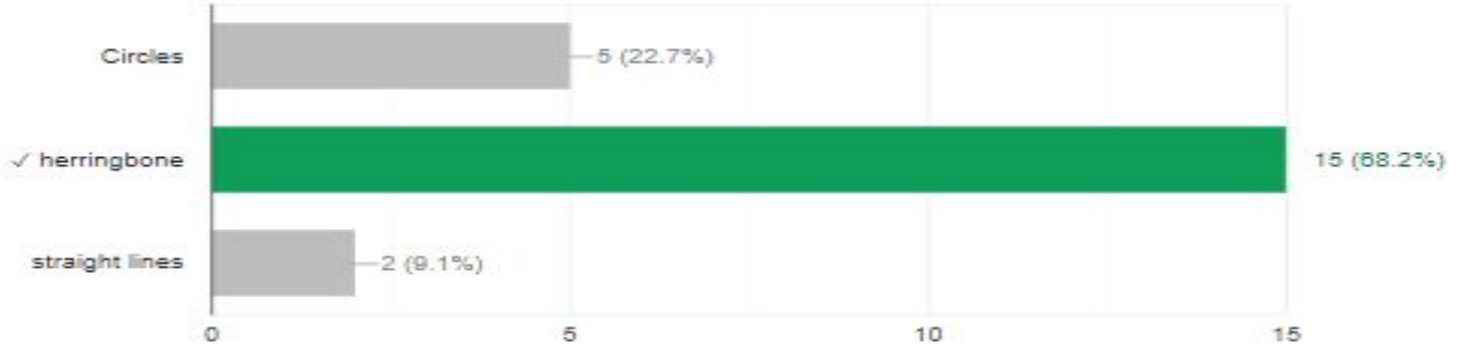

Which traction pattern would you prefer

Copy

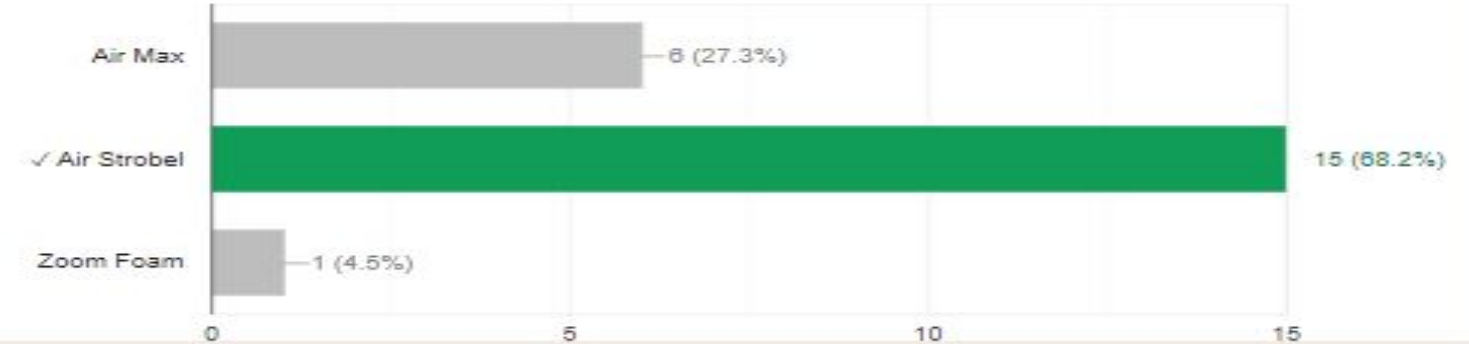

15 / 22 correct responses

Which would you prefer for maximum bounce

Copy

15 / 22 correct responses

Which would you prefer for maximum bounce

Copy

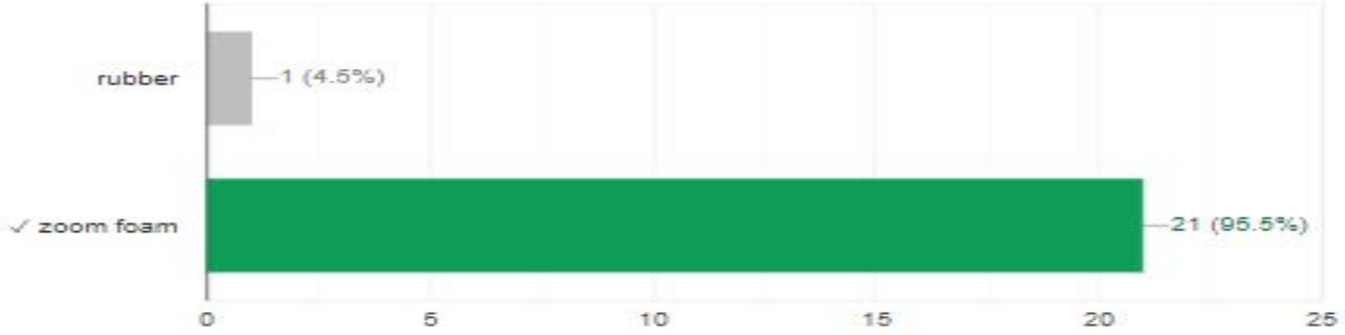

19 / 22 correct responses

Which would you prefer for the base of your shoe

Copy

21 / 22 correct responses

Which would you prefer as an outer material

Copy

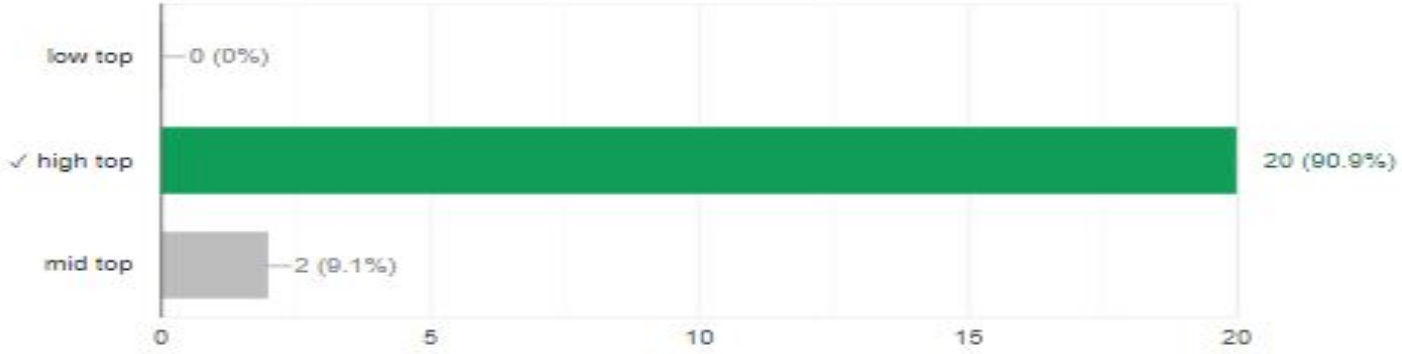

19 / 22 correct responses

Which would you prefer for ankle protection

Copy

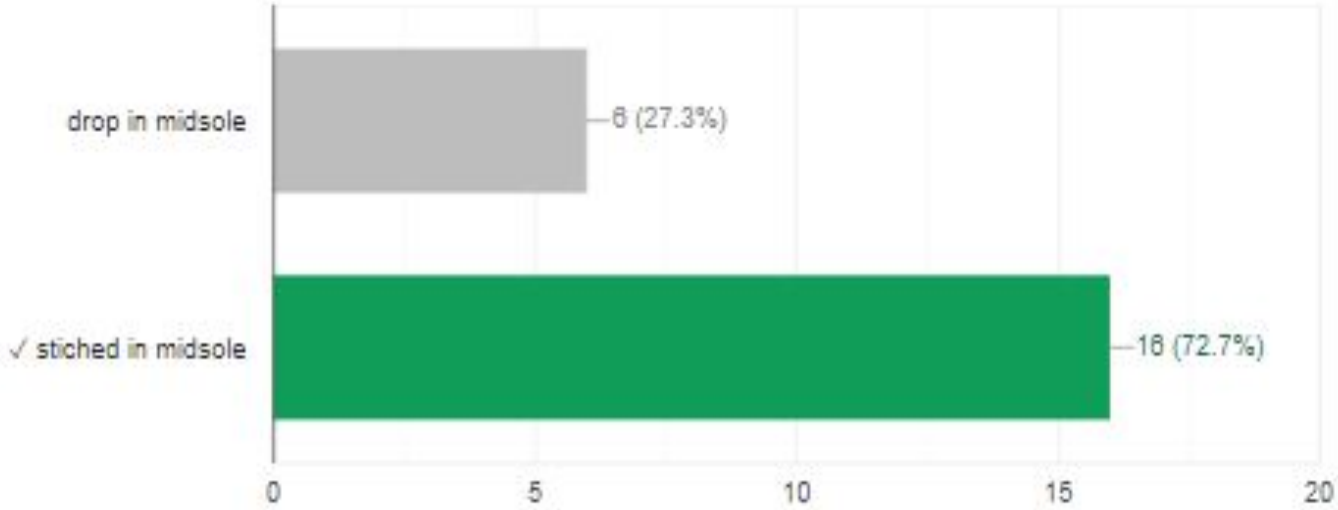

20 / 22 correct responses

Which would you prefer for ankle protection

Copy

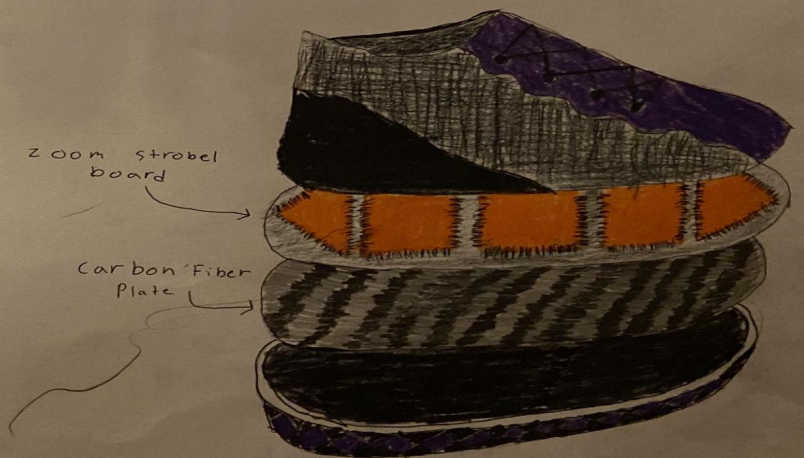

16 / 22 correct responses
